

# Ahmed Ebrahim

Backend Engineer (Laravel , Reactjs)

+201123451493   eng.ahmed0302@gmail.com   Cairo , Egypt   linkedin   github

+201123451493

## Summary

Backend Engineer with 3+ years of experience designing and building scalable Laravel applications for production environments across Real Estate, ERP, E-commerce, and Communication systems. Experienced in high-concurrency systems, RESTful APIs, WebSockets, Redis, Queues, and database optimization, with a strong focus on software architecture, performance, and maintainable backend design.

## Education

2021 – 2025   **Bachelor's degree of Computer science**, *Thebes Academy*

## Professional Experience

|                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Projects

### POS & Inventory Management System — Personal Project

- Architected a concurrency-safe POS system using database transactions with row-level locking (lockForUpdate) to prevent race conditions during simultaneous cashier sales
- Implemented FIFO/LIFO batch-based inventory tracking with multi-unit conversion factors, supporting accurate stock valuation across sales and returns
- Applied Repository, Service Layer, Factory, and Strategy patterns to decouple business logic from controllers, improving testability and maintainability
- Generated automated monthly inventory snapshots via Artisan commands for auditing and reporting

## Educational Center Management System — Personal Project

- Built a system managing student attendance, weekly schedules, tuition payments, and vacations for a learning center, including academic year, grade, and stage-based configuration

### Skills

**Backend:** Laravel, RESTful APIs, MySQL, MVC Architecture, Queues, Redis, Caching, Task Scheduling, WebSockets (Laravel Reverb)

**Frontend:** React.js, TypeScript, HTML5, CSS3, JavaScript, Bootstrap, Tailwind

**Dev Tools:** Git, GitHub, Postman, Composer

**Concepts:** Software Architecture, SOLID Principles, Design Patterns (Repository, Singleton, Factory, Strategy), RESTful API Design, Clean Code, Database Indexing & Optimization

**Security:** Familiar with common web vulnerabilities such as XSS, CSRF, and SQL Injection

### Languages

Arabic (Native), English (Professional)
