portfolio

Summary

Backend Engineer with 3+ years of experience designing and building scalable Laravel applications for production environments across Real Estate, ERP, E-commerce, and Communication systems. Experienced in high-concurrency systems, RESTful APIs, WebSockets, Redis, Queues, and database optimization, with a strong focus on software architecture, performance, and maintainable backend design.

Education

2021 – 2025 **Bachelor's degree of Computer science**, Thebes Academy

Professional Experience

03/2024 – 10/2025 Riyadh, Saudi Arabia	Backend Developer (Full-time) , Tqnia for Information Technology (Remote) • Delivered 10+ production-ready web applications across Real Estate, ERP, Booking, and Business Management systems used by clients in Saudi Arabia. - Designed and maintained scalable RESTful APIs supporting thousands of daily business operations for property management, rentals, and administrative workflows. • Built a real-time communication platform using Laravel Reverb, Redis, Queues, and WebSockets, enabling low-latency messaging for mobile applications. • Refactored legacy ERP modules following SOLID principles and design patterns, reducing code duplication and improving maintainability for future feature development. • Optimized high-traffic database queries by eliminating N+1 problems, adding indexes, and reducing response time on critical endpoints.
05/2023 – 08/2025 Remote, Lebanon	Backend Developer (Part-time) , MassFluence (Remote) • Built a full e-commerce platform using Laravel and React (products, cart, orders) • Built a personal branding website for a public figure, with a custom admin dashboard to manage content • Built CMS systems for multiple clients, enabling non-technical users to manage images, text, and page content without touching code

Projects

POS & Inventory Management System

- Architected a concurrency-safe POS system using database transactions with row-level locking (lockForUpdate) to prevent race conditions during simultaneous cashier sales
- Implemented FIFO/LIFO batch-based inventory tracking with multi-unit conversion factors, supporting accurate stock valuation across sales and returns
- Applied Repository, Service Layer, Factory, and Strategy patterns to decouple business logic from controllers, improving testability and maintainability
- Generated automated monthly inventory snapshots via Artisan commands for auditing and reporting

Educational Center Management System

- Built a system managing student attendance, weekly schedules, tuition payments, and vacations for a learning center, including academic year, grade, and stage-based configuration

Skills

Backend: Laravel, RESTful APIs, MySQL, MVC Architecture, Queues, Redis, Caching, Task Scheduling, WebSockets (Laravel Reverb)

Frontend: React.js, TypeScript, HTML5, CSS3, JavaScript, Bootstrap, Tailwind

Dev Tools: Git, GitHub, Postman, Composer

Concepts: Software Architecture, SOLID Principles, Design Patterns (Repository, Singleton, Factory, Strategy), RESTful API Design, Clean Code, Database Indexing & Optimization

Security: Familiar with common web vulnerabilities such as XSS, CSRF, and SQL Injection

Languages

Arabic (Native), English (Professional)
